Data Quality Report — Student Stress Dataset ETL

Author: Mai Kie **Date:** 2026-11-07 **Source:** `StressLevelDataset.csv` **Target:** `dw_stress1.fact_student_stress`

1. Star Schema Diagram

Grain of fact_student_stress: one row per student survey response.

2. Issues Found in Source

#	Issue	Details
1	No Missing Values	The dataset is surprisingly clean and fully populated.
2	Categorical Target	The stress_level column is numeric (0, 1, 2) but represents a category.
3	Wide Table	21 columns total, requiring separation into dimensions and facts.

3. Rules Applied

Schema Design: Extracted the stress_level into a dedicated dim_stress_level table to allow for readable labels (Low, Moderate, High) instead of just numbers.

Fact Table Loading: Kept all the survey scores as numeric facts in fact_student_stress for easy aggregation (e.g., AVG(anxiety_level)).

```
Data Types: All scores were loaded as INT since they represent a 1-5 Likert
scale or binary 0/1 responses.

4. Rows Loaded
Metric  Count
Total Rows in CSV   1100
Rows Rejected   0
Rows loaded into fact_student_stress    1100
```
